

Chapter Terms

Data Tier	<code>file_get_contents</code>
SimpleXML Data Model	<code>simplexml:load_string</code>
Type casting	JSON data
JSON Methods	associative array
<code>json_encode</code>	<code>json_decode</code>
Keywords	new line character
<code>file_put_contents</code>	<code>libxml:user_internal_errors(true)</code>
<code>libxml:get_errors</code>	count
<code>\$this</code>	unset
Dynamic arrays	releasing an object
<code>mysqli_connect</code>	<code>mysqli_connect_errno</code>
<code>mysqli_fetch_assoc</code>	<code>mysqli_free_result</code>
<code>mysqli_close</code>	SQL SELECT
SQL INSERT	polymorphism
Change log file	serialize
unserialize	backup and recovery
<code>preg_replace</code>	regular expression
<code>glob</code>	embedded if then else
SQL UPDATE	SQL script file/log
SQL WHERE	rand
strict search	unlink
shell	dependence injection

Chapter Questions and Projects

Multiple Choice

- Which of the following describes type casting?
 - It's rarely needed in PHP
 - It exists in most languages
 - It's needed for serialized data
 - All of the above
- Which of the following describes an associative array?
 - It has a key and value relationship (key->value)
 - It uses numerical subscripts
 - It does not have an index
 - A and B
