

## Overall

- You need to consider moving more program (file) names to XML files for easier version changes.
- You need to consider adding levels of access and approval for new user IDs.

## Chapter Terms

---

<code>\$_SERVER['HTTP_REFERER']</code>	HTML button
<code>split</code>	<code>var</code>
JSON object	<code>JSON.parse</code>
<code>getElementsByName</code>	HTML list boxes
<code>selectedIndex</code>	value
dot notation format	checked property
<code>is_bool</code>	<code>img</code>
<code>float: top</code>	<code>text-align: center</code>
Four Tier Application
